Fortifications are still being constructed on the extreme southeast part of the island of Korcula, around Cape Raznjic. These fortifications consist of the following:

- Four artillery bunkers have been finished on the side of the cape toward the Przina valley. Guns are to be installed at a later date. These bunkers are situated 10 meters above the sea wall.
- A large tunnel east of the valley, which is reported to be connected with the bunkers. Above and to the east of the tunnel, there is a large platform, 25 by 15 meters, inclined about 10 degrees, which is built of reinforced concrete.
- Several barracks for the complement of Raznjic have been erected in a small wood above the cape.
- A new reflector station southwest of the town of Lumbarda, which began to operate in September 1950.
- An anti-aircraft station, located on the heights around Lumbarda.
